

ITEM 8: Inquiry of the Brandenburg Federal State Government

Handout for the municipal council meeting of the municipality of Senftenberg

on 25. 10. 2022

Tesla Inc., together with Dekra as operator of the Lausitzring, has submitted an request to the State Ministry for Infrastructure and State Planning and to the Federal Ministry for Transport and Digital Infrastructure: From 01. 01. 2024, test drives for autonomous driving will also be carried out outside the area of the Lausitzring which is closed to the public during test operations.

In a first step in 2024, this concerns the access roads (L60) to the Lausitzring at the B169 as well as to the A13 autobahn (Senftenberger Straße to junction 15 Kettwitz). Furthermore are test operations planned on the A13 between junction 15 Kettwitz and junction 17 Ruhland, and the connection on the B169 from junction 17 Ruhland to the L60 near Senftenberg. The route planned for starting the tests in 2024 can be seen in the map section shown below.

The plan is to allow cars to drive essentially autonomously and later fully autonomously on this route in order to test and improve the capabilities of software and hardware for everyday traffic situations. The plans indicate

1. that the route network will be expanded in 12 monthly steps, starting from the Lausitzring, and
2. and that the autonomy of the vehicles will be increased more and more.

Aim of this agenda item:

Preparation of a statement for the City of Senftenberg
